- 4.13 A non-invasive and invasive testing does not detect dry rot.
- 4.14 A non-invasive moisture reading is not a conclusive indication that moisture is present or not present.
- 4.15 The outcome of the inspection can be influenced by a variety of factors including hidden metals or chemical preservatives, weather conditions and the depth at which any moisture may be present at.

Descriptions in this Inspection Report of systems or appliances relate to the existence of such systems or appliances only and not the adequacy or life expectancy of such systems or appliances. Any area or component of the building or any item or system not specifically identified in this report as having been inspected was not included in the scope of the inspection. Product names, materials and systems are generalised to help in reading and understanding the Inspection Report. - 4.29 Areas of the property that have access which is inaccessible, obstructed, not granted or gained, deemed unreasonable, dangerous or has restraints due to health & safety requirements do not form part of this inspection report.
- 4.30 The ceiling space and under floor are sometimes limited due to health & safety restrictions. Such circumstances may include where insulation covers the ceiling joists (unsafe to climb across), confined ceiling and floor spaces, no or restricted man hole access due to inaccessibility, dangerous surrounds and circumstances, obstructions and the like.
